General information

Hadassah University Medical Center is located in the western part of Jerusalem, Israel and comprise of two medical campuses and the Hebrew university medical School

For nearly 100 years, Hadassah Medical Center has been a leader in medicine in Israel. It has established the first modern hospital and medical, pharmaceutical and nursing schools, and set the climate for medical research in Israel.

The majority of medical breakthroughs in Israel have taken place at Hadassah. The first successful heart transplant was performed at Hadassah - as was the first robotic surgery and the world's First Computer-Assisted Hip Replacement Surgery.

Hadassah University Medical Center- Ein Kerem campus is 800-bed tertiary care hospital treats virtually every conceivable aspect of modern medicine and serves as a national referral center for complex and challenging medical cases. With over 130 departments and clinics, Hadassah Ein Kerem provides Israel's most advanced diagnostic and therapeutic services for the local and national population and a significant number of international patients. Our Medical Center is located in Jerusalem, the "Holy city" – sacred for Jews, Muslims and Christians. Hadassah serves as an example of collaboration between different cultures and religions, and working in Hadassah is not only an experience of medical excellence, but also a unique sociological, anthropological and spiritual experience.

The Department of Obstetrics and Gynecology at Hadassah Ein Kerem offers a plethora of specializations in the field of women's health such as infertility, fertility preservation, high risk pregnancy care, intrauterine fetal surgery, approach to menopause, golden age, contraception, modern surgical gynecology and Pediatric and Adolescent Gynecology
Chairman: Prof. Benjamin Reubinoff, MD PhD

FELLOWSHIP TRAINING PROGRAM

Objectives:

The Pediatric and Adolescent Gynecology Fellowship at the Hadassah University medical center is a one and a half -year program. Its goal is to teach fellows the basic science of embryology, physiology and reproductive endocrinology. Fellows during training should become familiar with diagnosis and management of common problems in pediatric and adolescent gynecology, such as vulvovaginal problems in young children , puberty disorders, menstrual irregularity, performing minor surgical procedures and ecc., as well as uncommon and more complex conditions, such as congenital reproductive anomalies, rare genetic diseases (due to the practice of Inbreeding in certain sectors), disorders of sex development, pediatric and adolescent gynecologic malignancies, gynecologic disorders in children with medical complications and complex reproductive endocrinopathies .

The fellow will take part in academic duties of the center, such as teaching students and residents and performing clinical or basic research.

The Training program aims to prepare the fellow for the IFEPAG exam part I + II and make him or her able to function professionally as a medical expert in the field of pediatric and adolescent gynecology

Fellowship program:

Clinical:

The fellow will participate in all PAG inpatient and outpatient clinics: DSD clinic, Ped Endocrinology unit, Ped hematology clinic, Ped psychiatry ward activities and ecc

PAG-surgery as gynecological, urological and pediatric surgeon activities as well as collaborative complex operation done on girls with complex congenital malformations,

Special focus will be emphasized on pediatric Emergency Room and sexual abuse center.

Rotations through several other pediatric subspecialties would be available dependent on fellow interest. Including: Adolescent Medicine, Pediatric Genetics, pediatric anesthesia, fertility preservation program and more.

Teaching:

Fellows will participate in PAG team staff meetings, educational conferences and teach in clinics as well as in the operating room to both residents and medical students.

Research:

Fellows will usually enroll in 6 months basic science or clinical research program . Hadassah University Medical Center is very well organized for research programs, ranging from clinical to highly sophisticated basic sciences

Structure

1 year of clinical and surgical activities

6 months of academic activities

Requirement for training

- Speaking English (or Hebrew) language
- Medical doctor (MD) graduate
- Complete residency in Ob&Gyn or Pediatrics

Assessment

During training the fellow will be evaluated through examinations, once in six months

At the end of the training, the fellow will be able to apply for the International Fellowship examination of Pediatric and Adolescent Gynecology, Part I and II

Application for fellowship: we use the common application form
